INFOGRIP LIMITED HARDWARE WARRANTY (NON-TRANSFERABLE)

The BAT™ keyboards and circuit boards are warranted to be free from failures due to defects in material and workmanship for one year, as long as you are the original owner. Infogrip, Inc. (“Infogrip”), will, at its sole option, replace or repair at no charge a product which, in its opinion, is defective.

You are responsible for packing the defective product properly for shipment and for all applicable shipping charges to return the unit to Infogrip. Infogrip will pay all applicable shipping charges to return the repaired unit to you. You will be responsible for repair and/or replacement costs if any of the following conditions occur:

- The defective product was out of warranty at the time Infogrip received it.
- The product was modified without Infogrip’s written consent, including the chord set.
- The defect was caused, in Infogrip’s opinion, by misuse, abuse or misapplication.

Infogrip has no obligation to repair or replace the failed product. Before returning a defective unit, you must obtain a Return Merchandise Authorization (RMA) number from Infogrip by visiting <http://www.infogrip.com/rma.asp>. The RMA number should be prominently displayed on the outside of the returned package and on the accompanying packing list. Infogrip cannot be held responsible for any package returned without an RMA number.

Except as expressly provided above, the hardware and accompanying written materials (including this Manual) are provided “as is,” without warranty of any kind, including the implied warranty of merchantability and fitness for a particular purpose, even if Infogrip has been advised of that purpose. In no event will Infogrip be liable for any direct, indirect, consequential or incidental damages arising out of the use of or the inability to use such product even if Infogrip has been advised of the possibility of such damages. Some states do not allow the exclusion or limitation of liability for consequential and incidental damages, so the above limitation may not apply.

Please be sure to register your BAT™ keyboard at www.infogrip.com/register.

Section One

Getting Started

Overview

Thank you for purchasing the BAT™ Keyboard from Infogrip, Inc. This innovative data entry device represents a dramatic step forward in the way information is entered into your computer.

The BAT Keyboard is available in both right and left handed versions. Each keyboard is capable of entering all the characters and functions of a traditional keyboard (plus many more), even though it has only seven keys! Data is entered using either hand or by alternating between both hands.

A “chord” is a combination of keys which are pressed simultaneously and then released to send a letter or command to your computer. Each BAT keyboard has three thumb keys (red, black and blue) and four finger keys (all black). Normally, black keys pressed in combinations will produce letters of the alphabet, while other combinations enter the cursor keys or command sequences.

We hope you enjoy your BAT Keyboard. To get started, turn to section two in this manual for complete installation instructions. Then try out the written tutorial. It only takes about an hour to learn the chords for the alphabet, numbers and basic punctuation.

Where To Go From Here:

We realize that learning to chord will be a different experience. Most people take to it very quickly, but not all people learn in the same way. For this reason, we have provided several different ways to learn chording. Try each method, choosing those that seem to help you the most.

The Written Tutorial

One of the best ways to learn the BAT Keyboard is to use the self-paced tutorial. It will take you through a logical process of learning chords, starting with the easiest one-finger and five-finger chords, and progressing to the less frequently used combinations. Before beginning the tutorial, you may wish to review the section titled Introduction to the BAT™ Keyboard which starts on page 14. The tutorial begins on page 26.

The BAT™ Keyboard Reference Guide

The BAT™ Keyboard Reference Guide is a stand-alone document which you will probably want to keep near your computer.

The Reference Section

This section gives you a complete cross reference to all of the chords.

Your Favorite Word Processor or Typing Tutorial

Some people also choose to strike out on their own, keeping the manual and/or Reference Guide handy while chording away in their favorite word processor or typing tutorial.

Tip:

When referring to chord entry, “pressing” means pressing the key(s) and then releasing them.

Conventions Used In This Manual

Throughout this manual the use of “BAT Keyboard” refers to both a single BAT keyboard or two units connected to the computer at the same time.

Data is entered into the computer by pressing and then releasing a combination of keys, called a CHORD.

A unique notation has been developed to describe which fingers should be pressed to create a given chord. An example of this notation is shown below:

Figure 1.1: Notation example

For ease of reading, the notation is always expressed from right to left, thumb to little finger. This notation is convenient since it reads the same way your hand lays on the BAT. If a box is darkened, the key for that finger should be pressed. Since the thumb is used for three separate keys, it is represented by a colored circle in the notation.

Figure 1.1a: Example of all keys pressed

Sometimes the same notation is used to represent two different characters, as in the example below:

Figure 1.2: Notation with two characters.

The first character results when the chord is entered normally. In order to enter the second character, you must first press the SHIFT chord (Blue key). This is explained completely in the **Introduction to the BAT™ Keyboard** and **Tutorial** sections. (The notation above is for the characters “,” and “<”. You will learn how to enter these characters in the tutorial.)

Keys on your BAT Keyboard are identified by the finger used to press them. Thus the finger under your little finger is called the “Little Finger” key. Other keys are referred to as the “Ring Finger key”, “Middle Finger key” and “Index Finger” key. The thumb keys are referred to as the “Red Thumb key”, the “Black Thumb key” and the “Blue Thumb key”.

Section Two

Getting Started

System Requirements

Below are the hardware requirements for using the BAT Keyboard:

- Any PC/Mac computer with a USB port
- At least one BAT Keyboard (or use two BATs simultaneously)

Hardware Installation

Installation of the BAT Keyboard is a simple procedure which involves connecting your BAT to the USB port of the computer. Each BAT keyboard is supplied with a cable for connecting the unit to your computer.

*Figure 2.1: Right BAT Keyboard
(Rear View)*

*Figure 2.2: Left BAT Keyboard
(Rear View)*

Each BAT Keyboard is a separate and independent keyboard. All characters and keyboard functions of a traditional keyboard can be entered using either a left handed or right handed keyboard or both. Please follow the instructions below for proper installation.

- 1) Make sure the computer is powered on
- 2) Plug BAT Keyboard into your USB Port
- 3) Your computer will recognize the BAT as new hardware.
- 4) After your BAT is recognized, you are ready to start typing with your keyboard.

Section Three

Positioning Your BAT Keyboard

Positioning Your BAT Keyboard

A great deal of research has gone into the design of the BAT Keyboard and its chord set to make typing as comfortable as possible. However, like any activity prolonged or over use can cause sore stiff muscles. Therefore, it is important to remember to take frequent breaks from typing throughout the day to give your muscles a rest. It makes sense to take some time to consider the various ways the BAT Keyboard can be positioned to maximize both comfort and efficiency.

The BAT Personal Keyboard has seven buttons. Three are used by the thumb, and four are used by the remaining fingers. The normal position is for all fingers to be on the black keys, as shown below. From this position the thumb can easily move to either red or blue keys.

Figure 3.1: Left and Right hands on BAT™ Keyboards

Here are some ideas for positioning your BAT Keyboards:

In front of your monitor:

Before you start, be sure to check that you have enough space in your work area and that your chair height is correctly adjusted. It is important to maintain a comfortable position while working with your computer. Now to positioning your BAT keyboard(s):

- 1) Clear the area on your desk where your keyboard normally sits.
- 2) Rest your hand(s) on the table or desk in front of you and adjust your hand(s) to the most comfortable and relaxed position.
- 3) Mark the spot(s) on your desk top.
- 4) Place the BAT Keyboard(s) on the marked spot(s).

Following these steps will insure the BAT Keyboards are placed at the correct position relative to your shoulders and arms.

On an armrest or in your lap:

If you spend long hours at the computer, you will find that placing the BAT Keyboard on the arm of a chair or in your lap allows you to adjust the position of your entire body, reducing fatigue. Many people find a lapboard (available at Infogrip) helpful, since it provides the keyboard with a level surface on which to rest.

With a traditional keyboard:

Your BAT Keyboard(s) can also be placed on either side of your traditional keyboard. This can be helpful while you are learning to chord.

Some people have a BAT keyboard on the left side of their traditional keyboard for the same reason they have a mouse on the right side — it extends the functionality of their system and makes them more productive. In this position the BAT Keyboard can be easily accessed, yet the traditional keyboard remains in its normal place.

With a notebook computer:

The BAT Keyboard is an excellent compliment to your notebook computer. Notebook keyboards are small and can be constraining to use. Your BAT keyboard(s) can easily be plugged into your notebook's USB port, placed in any of the suggested positions, for more comfortable use.

Section Four

Introduction to the BAT Keyboard

Tip:

Pressing and holding a chord will cause that character or function to repeat.

The chordset used by the BAT Keyboard is easy to learn and remember. While it is certainly a different way of entering data into your computer, with a little practice you will find chording to be natural and less tiring than traditional keyboard entry methods.

Each BAT keyboard can produce all the characters and functions of a traditional keyboard. Data entry is made by pressing and then releasing combinations of keys, called **CHORDS**. A chord may involve pressing one, two, three, four or five keys at the same time.

Each BAT keyboard is separate and independent of the other. This means either left or right keyboard can be used alone or the left keyboard can be entering letters while the right keyboard is entering numbers. The chords are grouped in two different ways — families and modes. They are described below. Notation for the individual chords can be found in the **Reference Section** or on the *BAT™ Keyboard Reference Guide*.

Families

The **Standard Family** is the one you will use most often. This includes the letters and numbers, as well as some punctuation. The thumb, when used, usually presses the black button, although there are some exceptions to this rule.

The **Red Family** consists of more punctuation and special chords which allow you to switch from one mode to another. The thumb always presses the red key in this family.

The **Red Family** also contains chords for the special keys found on a traditional keyboard. Some of these are ALT, CTRL and ESCAPE keys.

The **Blue Family** contains chords for cursor movement and modifier keys. Examples of these are: TAB, BACKSPACE, DELETE, ENTER, SHIFT and CAPS LOCK. The thumb always presses the blue key in this family.

Note:

**The blue light
flashes in shift
mode and stays
illuminated in
CAPS LOCK.**

Modes

LETTERS Mode. Chords for the alphabet and the space character are entered in this mode, which is also the default mode of the BAT Keyboard. All letters are entered using only black keys. For convenience, upper case letters have the same chords as lower case, except they are preceded by pressing the Blue Thumb key once. This is no different than pressing the SHIFT key on a traditional keyboard.

Example: Pressing the Little Finger key produces a lower case “w”. Pressing the Blue Thumb key once, followed by the Little Finger key produces an upper case “W”.

SHIFT

Figure 4.1: SHIFT

To enter characters in ALL CAPS press the Blue Thumb key and all four finger keys together. This is the same as pressing the CAPS LOCK key on a traditional keyboard. CAPS LOCK is turned off by repeating the same chord: the Blue Thumb key and all four fingers.

CAPS LOCK

Figure 4.2: CAPS LOCK

Tip:

NUMBERS/SYMBOLS mode enters the numbers and symbols located above the letters on a traditional keyboard. For keypad numbers see page 18.

If you have two BAT keyboards you can put one in LETTERS and the other in NUMBERS/SYMBOLS mode.

Note:

Red light flashes in temporary NUMBERS/SYMBOLS mode. Red light stays illuminated in NUMBERS/SYMBOLS LOCK.

NUMBERS/SYMBOLS Mode. Entering numbers and symbols is similar to chording in upper case, except we use the Red Thumb key. Pressing the Red Thumb key once allows you to enter one number and returns to LETTERS mode. Pressing the Red Thumb key with all four fingers locks you into NUMBERS/SYMBOLS mode. Repeating the chord will return you to LETTERS mode.

Figure 4.3: NUMBERS/SYMBOLS

Figure 4.4: NUMBERS/SYMBOLS LOCK

The NUMBERS/SYMBOLS mode also contains symbols which are normally found above the numbers on a traditional keyboard. To chord a symbol press the Blue Thumb key while in NUMBERS/SYMBOLS mode, followed by the desired symbol.

Introduction to the BAT Keyboard

Note:

The Red Thumb key becomes the space key while in NUMBERS/SYMBOLS mode.

Note:

Red light flashes rapidly when the FUNCTION chord is pressed.

Example: Pressing the Red Thumb key, followed by the Little Finger key, produces the number “5”. The keyboard now returns to LETTERS mode.

Example: Pressing the Red Thumb key with all four fingers locks the BAT in NUMBERS/SYMBOLS mode. Now press the Blue Thumb key (for shift), followed by the Little Finger key. This chords a “%” sign and returns to NUMBERS/SYMBOLS mode.

The NUMBERS/SYMBOLS mode also has some very useful keys already programmed. Pressing the Middle Finger key and Ring Finger key produces a double zero [“00”]. Pressing all four fingers (no thumb key) produces a triple zero [“000”]. These are the adding machine symbols from years ago that someone forgot to put on modern computers!

While in NUMBERS/SYMBOLS mode you can also enter both sides of a quotation [“ ”] or parentheses [()] with one key stroke and the cursor will automatically be positioned between them! You will learn about these keys in more detail during the tutorial.

FUNCTIONS Mode. Function keys are found on traditional keyboards and are usually labeled F1- F12. To enter a function key, first enter the chord for FUNCTIONS mode by pressing the Red Thumb key and the Little Finger key (this is similar to the chord for the letter “F”). Now enter the number for the FUNCTION key you wish to use.

*Figure 4.5:
FUNCTION KEY
Entering the
chord for the
FUNCTION KEY,
followed by the
chord for num-
ber 7, activates
“F7”.*

Note:

The yellow and red lights will illuminate when you are in KEYPAD NUMBERS mode.

After entering the desired function key, the BAT Keyboard automatically returns to the LETTERS mode.

KEYPAD Mode. Many applications treat numbers found on the keypad separately from those found above the letter keys. To enter these numbers, you must be in KEYPAD mode.

Press the Red Thumb key, Index Finger key and Ring Finger key at the same time to enter KEYPAD mode. Once in KEYPAD Mode, turn numbers/symbols lock on to enter keypad numbers or turn numbers/symbols lock off to use other keypad functions such as Home, End, Page up, Page down, Insert, and the arrow keys. You will remain in KEYPAD mode until you deactivate it by pressing the KEYPAD chord a second time. This will return you to your previous mode.

Figure 4.6: KEYPAD mode

Introduction to the BAT Keyboard

There are three chords that are used to keep the BAT identical to a traditional keyboard. They are LATCH, RIGHT MODE and WIN/APPLE chords.

LATCH:

The BAT uses a concept similar to Sticky Keys. This means when you press a modifier chord such as SHIFT, ALT/OPTION, CTRL, or WIN/APPLE the key is pressed and held until the next chord is pressed. This is how you can use Shift+L to make a capital L. From time to time a user may want to press and hold a modifier key followed by pressing and releasing another key several times. An example would be on a Mac; pressing down the Apple key then pressing and releasing the Tab key several times, or on a Windows machine, pressing and holding the Alt key then pressing and releasing the Tab key several times. Both enable you to scroll through all of the applications that are open on your computer. On the BAT, simply press the LATCH chord before or after the modifier key that you want to press and hold. Next, press the key(s) that you want as many times as you need to. When you're done, simply press the LATCH chord for the next modifier key and your BAT will be back in its normal state.

Figure 4.7: LATCH mode

Note:

Use the RIGHT MODE chord if you use a specific software that can only use the right CTRL key or any other right modifier key.

RIGHT MODE

Most computer applications don't recognize the difference between the left modifier keys, such as CTRL, ALT/OPTION, AND WIN/APPLE, and the right modifier keys. The BAT Keyboard by default uses the left modifier keys.

Figure 4.8: RIGHT mode

WIN/APPLE

The WIN/APPLE chord is used by Mac users a bit more than by windows users. You will find this key to work just like a standard keyboard with one exception. Because it's a modifier key, it is meant to be used in conjunction with another key. However, Window users also use this key by itself to open the Start menu. To do this with the BAT WIN/APPLE chord, simply press and release the chord twice. This will open the Start menu in Windows.

Figure 4.9: WIN/APPLE

Note:

To RESET the BAT Keyboard, press the three thumb keys simultaneously. This essentially initializes your BAT keyboard to default mode. The mode indicator lights blink once (page 22) and the BAT Keyboard will return to LETTERS mode.

Keyboard Mode Indicator Lights

The BAT Keyboard has built-in keyboard mode indicators that light up to confirm the current mode. There are three lights located above the thumb keys. Each light represents the thumb key of the same color (except the Black Thumb key, the light is yellow.)

The mode indicators will light up in different combinations, depending on the current mode of your keyboard. If you have two BAT keyboards, keep in mind that each is independent of the other, therefore the indicators can light up in different combinations on each keyboard.

MODE	BLUE	YELLOW	RED
LETTERS Mode (Lower Case)	OFF	OFF	OFF
LETTERS Mode (Shift)	SLOW BLINK	OFF	OFF
LETTERS Mode (Caps Lock)	ON	OFF	OFF

Figure 4.10: Keyboard mode indicator lights

In LETTERS MODE, all lights will be off unless you enter capital letters. If you press the Blue Thumb key, the blue light will blink slowly, indicating the next character entered will be an upper case letter or a shifted number or symbol. Once a key is pressed, the light stops blinking, indicating you have returned to the unshifted LETTERS MODE.

If you press the Blue Thumb key along with all four finger keys, the blue light will stay on, indicated you have enabled CAPS LOCK. The light will turn off when CAPS LOCK is disabled by repeating the Blue Thumb and all four fingers chord.

Introduction to the BAT Keyboard

MODE	BLUE	YELLOW	RED
NUMBERS/SYMBOLS Mode (Enter one character)	OFF	OFF	SLOW BLINK
NUMBERS/SYMBOLS Mode(Lock)	OFF	OFF	ON
FUNCTIONS Mode	OFF	OFF	FAST BLINK
LATCH Mode	SLOW BLINK	SLOW BLINK	SLOW BLINK
RIGHT Mode	OFF	OFF	OFF

Figure 4.11: Keyboard mode indicator lights

The red light is used to indicate the status of NUMBERS/SYMBOLS or FUNCTIONS mode. If you press the Red Thumb key, the red light will blink slowly, indicating the next character entered will be a number. Once a key is pressed, the light stops blinking, indicating you have returned to the unshifted LETTERS mode.

If you press the NUMBERS/SYMBOLS chord key along with all four finger keys, the red light will stay on, indicating you have enabled NUMBERS/SYMBOLS LOCK. The light will turn off when NUMBERS/SYMBOLS LOCK is pressed again.

The red light will blink fast when the functions chord is pressed, indicated you have entered FUNCTIONS mode. The BAT Keyboard automatically returns to the previous mode after the next chord is entered.

All three lights (blue, yellow and red) will blink slowly indicating you are in LATCH mode. The lights will go off when you press latch again.

While in RIGHT MODE, none of the lights illuminate. However, the BAT will now produce the modifier keys that are found on the right side of a traditional keyboard. These keys are the right ALT/OPTION, WIN/APPLE, and RIGHT CTRL keys. The next time you reset the BAT or restart your computer, the BAT will go back to default settings.

Introduction to the BAT Keyboard

Tip:

Remember, each BAT Keyboard is a fully functional keyboard independent of any other input devices.

If you have two BAT keyboards, each can be in a different mode at the same time.

MODE	BLUE	YELLOW	RED
KEYPAD Mode (Num Lock off)	OFF	ON	OFF
KEYPAD Mode (Num Lock on)	OFF	ON	ON
CONTROL Key Depressed	OFF	SLOW BLINK	OFF
ALT/OPTION Key Depressed	OFF	FAST BLINK	OFF
Win/Apple Key Depressed	FAST BLINK	OFF	OFF

Figure 4.12: Keyboard mode indicator lights

The yellow light stays on when you enter the **KEYPAD** mode by pressing the Red Thumb, Index Finger and Ring Finger keys. The light will stay on until another mode is entered.

NUM LOCK is only activated while in **KEYPAD** mode. To activate **NUM LOCK** press the Red Thumb and all four fingers. Both the yellow and red lights will stay on until the chord for **NUM LOCK** is disabled.

The yellow light will blink slowly when the chord for the **CONTROL** key is pressed, Red Thumb, Index, Ring and Little. The light will continue to blink until the next chord is entered.

A fast yellow blink will occur when the chord for the **ALT/OPTION** key is pressed, Red Thumb, Middle, Ring and Little. The light will continue to blink fast until the next chord is entered.

A fast blue blink will occur when the chord for Win/Apple key is presesed, Red Thumb and Index. The light will continue to blink fast until the next chord is entered.

RESET

When you **RESET** your BAT keyboard (red, black, and blue thumb pressed at the same time), all three lights (blue, yellow and red) will blink once.

Section Five

Tutorial

Introduction

One of the best ways to learn the BAT Keyboard is to use the self-paced tutorial. It will take you through a logical process of learning chords, starting with the easiest one-finger and five-finger chords, and progressing to the less frequently used combinations.

To get started, simply run your favorite word processor and follow the lessons that we have provided for you on the following pages.

Lesson One — One Finger Chords

Four letters and a space can be entered using only one chord. These letters are I, R, Y and W. The notation for these chords can be found below.

Figure 5.1: i, r, y and w

Using these four letters you can spell **wiry**. Chord **wiry** several times. Refer to the notation above if you need help. Don't worry about capital letters or spaces. You will learn the **SPACE** and **SHIFT** keys in a couple minutes.

Note:

The blue light will flash when you are in SHIFT mode.

A SPACE is entered by pressing the Black Thumb key.

Figure 5.2: SPACE

For practice, try chording **wiry** several times again, this time separate the words with spaces.

The SHIFT key is also entered with a one-key chord. To chord a capital letter, press the Blue Thumb key once. This puts the BAT Keyboard into the SHIFT mode for the next character to be entered.

Figure 5.3: SHIFT

Note:

**The red light
will flash when
you shift to
NUMBERS/SYMBOLS
mode.**

Try chording **wiry**, pressing the Blue Thumb key first, and then the Little Finger key to create a capital **W**. Using the four letters you have learned so far, experiment by entering several capital letters. Refer to the notation below if you need help.

Figure 5.4: SHIFT, W, I, R and Y

You can also activate CAPS LOCK using the BAT Keyboard. You will learn how to do this in lesson two.

One Finger Numbers

Numbers one through five can also be entered on the BAT using one key chords. To enter numbers, the BAT must first be in NUMBERS/SYMBOLS mode. Shifting to NUMBERS/SYMBOLS is similar to shifting to upper case, except using the Red Thumb key.

Figure 5.5: NUMBERS/SYMBOLS

Tip:

You can also enter the following symbols by first entering NUMBERS/ SYMBOLS mode, then using the SHIFT chord:

!, @, #, \$ and %

This is the same as pressing the SHIFT key and numbers 1, 2, 3, 4 or 5 on a traditional keyboard.

To enter one number, press the Red Thumb key. The next chord you press will enter a number. Numbers one through five can also be entered with one-finger chords. Their notation is shown below.

Figure 5.6: Numbers 1 to 5

Try chording numbers one through five. Don't forget to press the Red Thumb key before each number chord or you will enter a letter instead. By now you will note that just as there is a CAPS LOCK for letters, there is a NUM/SYM LOCK for numbers. You will learn about this in the next lesson.

Lesson Two — Five-Finger Chords

Five-finger chords are also easy to learn, as there are so few of them.

The letter o is entered by pressing all the finger keys along with the Black Thumb key. Its notation is below.

Figure 5.7: The letter O

To enter a capital O first press the Blue Thumb key followed by the chord for the letter o.

You can now begin chording sentences. The following words and sentences use only the chords you have learned so far. Chord them a few times, even though they are a bit silly. You will learn other letters in subsequent lessons.

roy	i row wow
wow	roy i row
row	roy wow i row

If you make a mistake, just keep going. You will learn how to correct mistakes in the next lesson.

The number zero is entered by first pressing the Red Thumb key, followed by the chord for the letter **O**. This makes it easy to remember.

Note:

The blue light stays illuminated when you are in CAPS LOCK.

The red light stays illuminated when you are in NUMBERS/SYMBOLS LOCK.

The CAPS LOCK feature is also activated by using all five fingers. To chord in all capital letters, press the Blue Thumb key with all four finger keys.

Figure 5.8: CAPS LOCK

You will continue to chord capital letters until you deactivate CAPS LOCK by pressing the Blue Thumb key and all four finger keys a second time.

NUMBERS/SYMBOLS LOCK is activated in almost the same way, except you press the Red Thumb key with all four finger keys.

NUMBERS/SYM LOCK

Figure 5.9: NUMBERS/SYMBOLS LOCK

You will continue to chord numbers and symbols until you deactivate NUMBERS/SYMBOLS LOCK by pressing the Red Thumb key and all four finger keys a second time.

Lesson Three — Two-Finger Chords

While learning the BAT Keyboard you have probably already made a mistake or two. Here is how to correct them. Most keys that modify your data entry in some way (such as the SHIFT key) involve the Blue Thumb key. To correct a mistake, press the Blue Thumb key and the Middle Finger key together. This is the same as pressing the BACKSPACE or MAC DELETE keys on a traditional keyboard.

Figure 5.10: BACKSPACE

If you wish, try chording the sentences from the previous lesson again. This time, correct any mistakes using BACKSPACE.

roy
wow
row

i row wow
roy i row
roy wow i row

The letters D, H, L and U are easy to chord since they use keys which are next to each other, as shown below:

Figure 5.11: The D, H, L and U

Practice the following words and sentences which use these new chords.

hi	you	Would you hold your rowdy old owl
do	hold	
oh	holy	How did you dry your oily hull
dry	hour	
duo	howl	Did you howl loud
hid	hull	
how	loud	I hid your lid
lid	oily	
oil	wild	Hi how do you do
old	word	
owl	your	
who	rowdy	
why	would	

Lesson Four — More Two-Finger Chords

Another chord you will use frequently is the `ENTER` key. The notation for the `ENTER` key can be found below. Try chording some of the examples from the previous page again using the `ENTER` key after each word or sentence.

Figure 5.12: *ENTER*

hi	you	Would you hold your rowdy old owl
do	hold	
oh	holy	How did you dry your oily hull
dry	hour	
duo	howl	Did you howl loud
hid	hull	
how	loud	I hid your lid
lid	oily	
oil	wild	Hi how do you do
old	word	
owl	your	
who	rowdy	
why	would	

The letters B, C, F, G and K can be entered with two-finger chords. Try chording the words and phrases that use these letters after studying the notation below.

Figure 5.13: The B, C, F, G and K

go
bid
big
bill
bud
bug
cub
dig
hug
kid
buck
buff
club

Dick
duck
gulf
huff
lick
luck
build
child
fluid
kwirky

Why did you build your club by Bill
Did you hug your child
Go Big Bud
Why did Dick duck

Note:

Remember, to enter the second character you must first SHIFT.

The numbers 6 - 9 are also entered with two-finger chords. These are easy to remember since they are chorded by adding the Black Thumb key to the 2 - 5 chords. When practicing these numbers, don't forget to switch to the NUMBERS/SYMBOLS mode by either pressing the Red Thumb key alone (for one number) or pressing the Red Thumb key with all four fingers (for NUMBERS/SYMBOLS LOCK).

Figure 5.14: Numbers 6 to 9

Finally, some punctuation and special symbols can also be entered with two-finger chords. A comma can be easily chorded by pressing the Red Thumb key and Middle Finger keys. A "less than" sign (<) can be entered with the same chord by preceding it with the SHIFT chord.

Figure 5.15: Comma

Tip:

Some symbols have more than one chord, making them easier to enter while in different modes.

The Question Mark (?) can also be entered with the following chord while in NUMBERS/SYMBOLS mode:

The following two-finger chords are entered while in the NUMBERS/SYMBOLS mode. Remember to press the Red Thumb key once before these characters. You may also choose to lock the BAT Keyboard in NUMBERS/SYMBOLS mode by pressing the Red Thumb key with all four fingers.

Figure 5.16: Slash /question mark, backslash /vertical line, dollar sign

Note that you must first use the SHIFT chord to enter a question mark or vertical line. Try some of the new sentences below which use letters you have already learned, plus these new symbols.

Lucky Bill bid your duck for \$1

Would you hold your wild cub!

Did you hug your big kid?

Dick could build your club!

You howl loud!

I will bill Roy \$100 for your big bug

Lesson Five — Special Two-Finger Chords

There are several two-finger chords which are useful for cursor movement or sending commands. You have already learned the `ENTER` and `BACKSPACE` chords. The left cursor and right cursor are also two-finger chords, as well as the `WIN/APPLE` chord.

Figure 5.17: `WIN/APPLE`, `LEFT` and `RIGHT` cursor

Lesson Six — Easy Three-Finger Chords

Some of the three-finger chords are letters you will use frequently. These include E, M and S. Once again, study the notation below, and then try some new words and phrases.

Figure 5.18: E, M and S

be
me
see
sew
yellow

sky
blue
home
sold
chief
mellow

He is so mellow.
I sold your blue blouse for \$35!
Will you build our home?
Do you see the bug?
I see blue sky!

Three math symbols are also very easy to enter using three-finger chords. These are the equals, times and minus signs. Remember to shift into NUMBERS/SYMBOLS mode before entering the following chords.

Figure 5.19: NUMBERS/SYMBOLS mode — equals/addition, multiply and subtract/underscore

Lesson Seven — More Three-Finger Chords

The rest of the three-finger letter chords are all consonants. These letters are J, P, V, X and Z. Try the new words and sentences below after studying the notation for these letters.

Figure 5.20: J, P, V, X and Z

box
 hex
 vex
 Jim
 Jeff
 bump
 swim
 cupid
 Mexico
 people
 vehicle
 demolish
 compulsive

Why did you build your club by Jeff's
 house?
 Who bumped me?
 I will demolish your vehicle!
 Cupid loves Feb 14

The semi-colon, period, percent sign and right bracket are also entered with three-finger chords. They are notated below. The semi-colon and period are entered in LETTERS mode. The percent sign and right bracket are entered while in NUMBERS/SYMBOLS mode.

Figure 5.21: Semi-colon/colon, period/"greater than" sign, percent sign, right bracket/right brace

25%
From:
10.35
5 > 2
9 - 3 = 6

We received 23% off; however, we wished for more.

Sue, you owe me \$143.25.

From: Joseph Poe

Lesson Eight — Special Three-Finger Chords

There are several three-finger chords which use the Blue Thumb key. These chords will allow you to chord the DELETE key, the UP and DOWN cursor keys, TAB and END.

Figure 5.22: DELETE, C, F, TAB, AND END

Lesson Nine — Four-Finger Chords

There are only four letters which use four-finger chords. These are A, N, Q and T.

Figure 5.23: A, N, Q and T

about
basic
cellular
dentist
eat
farther
gone
heart
insist
January
knot
litter
masque

nova
onto
pants
quaint
raven
santa
talon
unit
violent
want
Xavier
yesterday
zebra

Alice wanted to paint the zebra violet.
Bill just bought a cellular phone.
Tom can throw the ball farther.
Tranquility Base is on the lunar surface.

Tip:

The Question Mark can also be entered with a two-finger chord as shown on page 35.

There are three symbols which also use four finger chords. The left bracket, question mark and addition symbol are entered while in the NUMBERS/SYMBOLS mode, as notated below.

Figure 5.24: NUMBERS/SYMBOLS mode — left bracket/left brace, question mark and addition symbol

The apostrophe and single quotation mark are entered while in LETTERS mode.

Figure 5.25: LETTERS mode — apostrophe and quotation mark

Note:

**For explanation
of the BAT right
mode, please see
page 22.**

Lesson Ten — Special Four-Finger Chords

There are several four-finger chords which control screen movement or send commands. These chords will allow you to PAGE UP, PAGE DOWN, enter HOME, CONTROL, ALT, OR RIGHT MODE.

Figure 5.26: PAGE Up, PAGE DOWN, HOME, CONTROL, ALT, and RIGHT MODE

Tip:

**Function Keys
F1 through F9
are easy to
remember,
since they are
the same as the
chords for numbers
1 through 9.**

Note:

**The red light flashes
fast when you are in
FUNCTIONS mode.**

Lesson Eleven — Function Keys

Once in the FUNCTION KEY mode, you can enter any function key normally found on a traditional keyboard. Press the FUNCTION KEY mode chord, followed by the chord for the desired function key, as shown below.

Figure 5.27: Function keys F1 through F12

Once you have entered a function key, your BAT automatically returns to the previous mode.

The yellow light will stay illuminated when you are in KEYPAD mode.

**The red light
illuminates for
NUM LOCK.**

Some programs treat the numbers on the keypad differently than those that run along the top of the keyboard. Although the chords for these keys are the same as those you have learned already, you must put the BAT Keyboard into the `KEYPAD` mode before entering them.

The notation for these chords is below for your convenience. Remember to toggle numlock on and off.

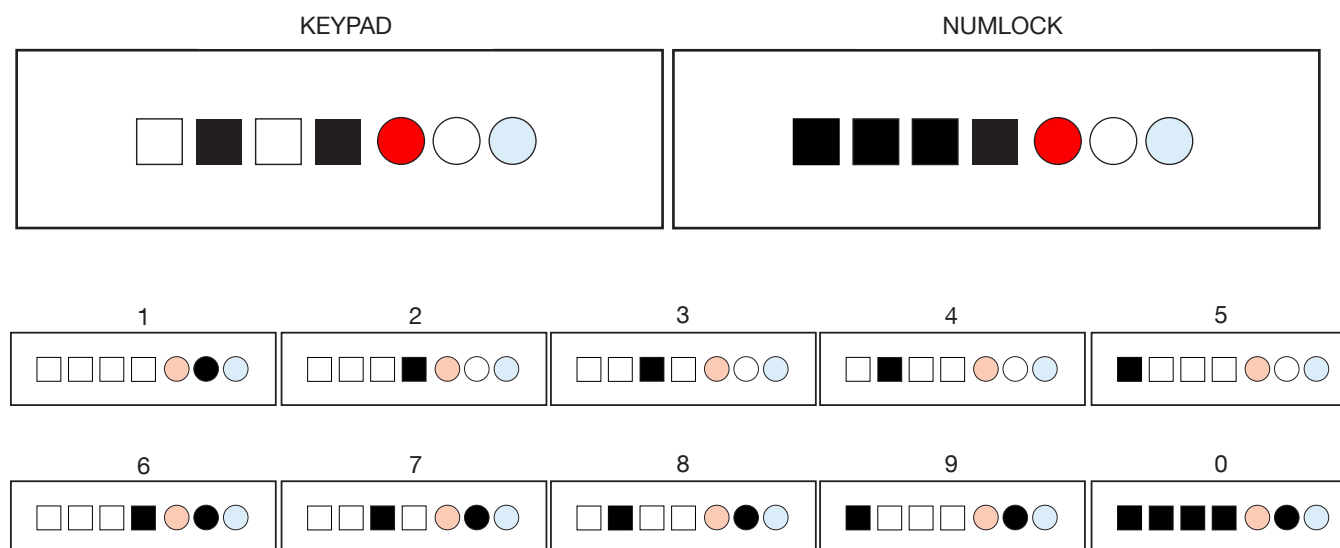

Figure 5.28: *KEYPAD mode — Numbers 1 through 0*

Note:

Pressing NUM LOCK in KEYPAD mode will toggle the red light on or off.

Once in KEYPAD mode, the other math symbols can also be entered using chords you have already learned.

Figure 5.29: KEYPAD mode

To exit KEYPAD mode, simply press the KEYPAD chord again.

Lesson Thirteen — Simple Macros

Several time-saving macros are already programmed into the standard chord set. These are 00, 000, " " and (). You must be in NUMBERS/SYMBOLS mode or KEYPAD mode to enter these chords.

Figure 5.30: Double zero, triple zero, parentheses, quotation marks

When you enter the chord for 00 or 000, two or three zeros are entered automatically. These chords are equivalent to the same keys on older adding machines which someone forgot to add to most modern calculators and computers.

The last two are special macros which will enter both quotation marks or parentheses signs, with the cursor automatically placed between them. Once you have entered the numbers or words that are to appear inside these characters, you simply enter a right cursor chord to move the cursor outside the quote or parentheses.

Section Six

Tips and Tricks

Punctuation and FUNCTIONS Mode

Most punctuation and mode switching is designed for ease of use. The table below lists some chords that have mnemonic reference. To enter them, press the chord for the letter listed in the right column, substituting the Red Thumb key for the Black Thumb key.

Symbol	Name	Chord
'	apostrophe	a
,	comma	c
.	period	p
FUNCTIONS mode	"function"	f

Figure 6.1: Tricks for punctuation and FUNCTIONS modes

Symbols

Many of the math symbols use chords that are the same as the first letter of their name. The only difference is that you must be in **NUMBERS/SYMBOLS** mode before entering them. Here are some helpful hints for remembering the math symbols.

Symbol	Name	Chord
+	add	a
-	subtract	s
*	multiply	m
/	divide	d
=	equals	e
%	percentage	p
\	backslash	b

Figure 6.2: Tricks for symbols

Tip:

Use the LATCH chord to hold down a mode key such as SHIFT, ALT/OPTION, CONTROL, or WIN/APPLE. It will not be released until you press the latch chord again.

Special Key Sequences

Many programs have command sequences which use SHIFT, ALT/OPTION, CONTROL, or WIN/APPLE followed by a function key or a letter. To enter a key combination simply enter the combination as you would say it or as it is written. See figure (6.3) for an example.

Figure 6.3: Examples of command sequences

Entering ASCII Codes

On a traditional keyboard an ASCII code is entered by pressing and holding the ALT key, typing in the numeric code on the numeric keypad, then releasing the ALT key. Since the BAT keyboard uses sticky keys, an ASCII code is entered slightly different.

To directly enter an ASCII code, put the BAT into the KEYPAD mode (press Red Thumb, Index and Ring fingers). Be sure that you are in NUMLOCK (Red Thumb, all four fingers). Press and release the ALT key and LATCH key using the LATCH chord (Red Thumb, index and middle fingers). Next, enter the three-digit numeric code, then press ALT again. The appropriate character will be sent to the PC. If you want another ASCII character, simply press alt again, enter the three digit code, then alt again and the character will appear. When you are done, press the chord for LATCH and you will be back in keypad mode with numlock on. To get back to lower case letters press numlock then keypad. All lights will be off. Alternatively, press RESET (press and release all three thumb keys at the same time) to go back to lower case letters.

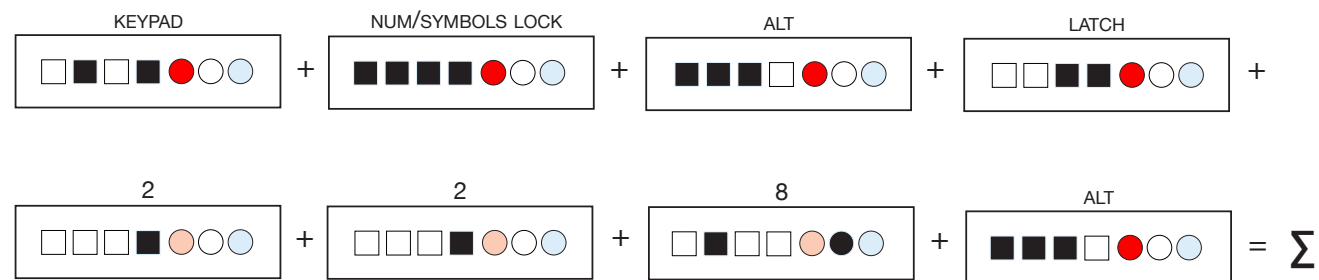

Figure 6.4: Example of entering ASCII code

Troubleshooting

Is your BAT Keyboard doing any of the following?

- 1) Won't change modes
- 2) Freezes (Keyboard won't enter characters that you are trying to enter)
- 3) Gives you funny characters on the screen

Try entering RESET, the three thumb keys pressed simultaneously.

If resetting the BAT does not clear the problems you are experiencing, simply unplug the USD cable from the BAT and then reconnect it.

Reference Section

BAT Chord Notation Charts

This section provides a reference to all the chords provided in the BAT Keyboard's standard (or default) chord set. Chords are grouped in two ways — by families and modes.

Chord Families

Chords can be in one of three families. Standard (Black), Red or Blue.

The Standard family contains the letters and numbers (and some punctuation). It is the default mode for the BAT Keyboard. Most data entry is done using Standard family chords, since it includes all the letters in the alphabet.

The Red family contains punctuation and special keys, such as `ESCAPE`, `CONTROL` and `ALT/OPTION` and `WIN/APPLE` modes are activated using chords in the red family as well.

The Blue family has cursor movement and cursor control, as well as the `SHIFT`, `BACKSPACE`, `ENTER` and `TAB`. In general, chords from the blue family do not enter printable characters.

Modes

All chords also belong to one of four modes. These are `LETTERS`, `NUMBERS/SYMBOLS`, `FUNCTIONS`, and `KEYPAD`. All modes (except `LETTERS`) are activated by entering a chord from the Red family.

A chord's family is identified by the color of the thumb key. A mode consists of the characters that are entered by that chord set.

Each family and mode is discussed and notated on the following pages.

Tip:

The **RESET** function is entered by pressing all three thumb keys (red, black and blue) at the same time.

LATCH
Press to enter **LATCH MODE**. Press again to return to previous mode.

RIGHT MODE
Press once to enter **RIGHT MODE**. Press again to go back to default.

WIN/APPLE
Press once to enter **WIN/APPLE MODE**. Automatically returns to the previous mode.

Standard Family (Letters, numbers and symbols)

Any chord which is entered using only the black keys is considered to be in the Standard family. These are the chords you use most often and consist of letters and numbers.

Red Family (Mode chords, special keys and some punctuation)

Press once to enter NUMBERS/SYMBOLS mode for one number. Automatically returns to the previous mode.

Press to enter NUMBERS/SYMBOLS mode. Press again to return to previous mode.

Press once to enter FUNCTIONS mode followed by a number. Automatically returns to the previous mode.

Press to enter KEYPAD mode. Press again to return to previous mode.

SPECIAL KEYS

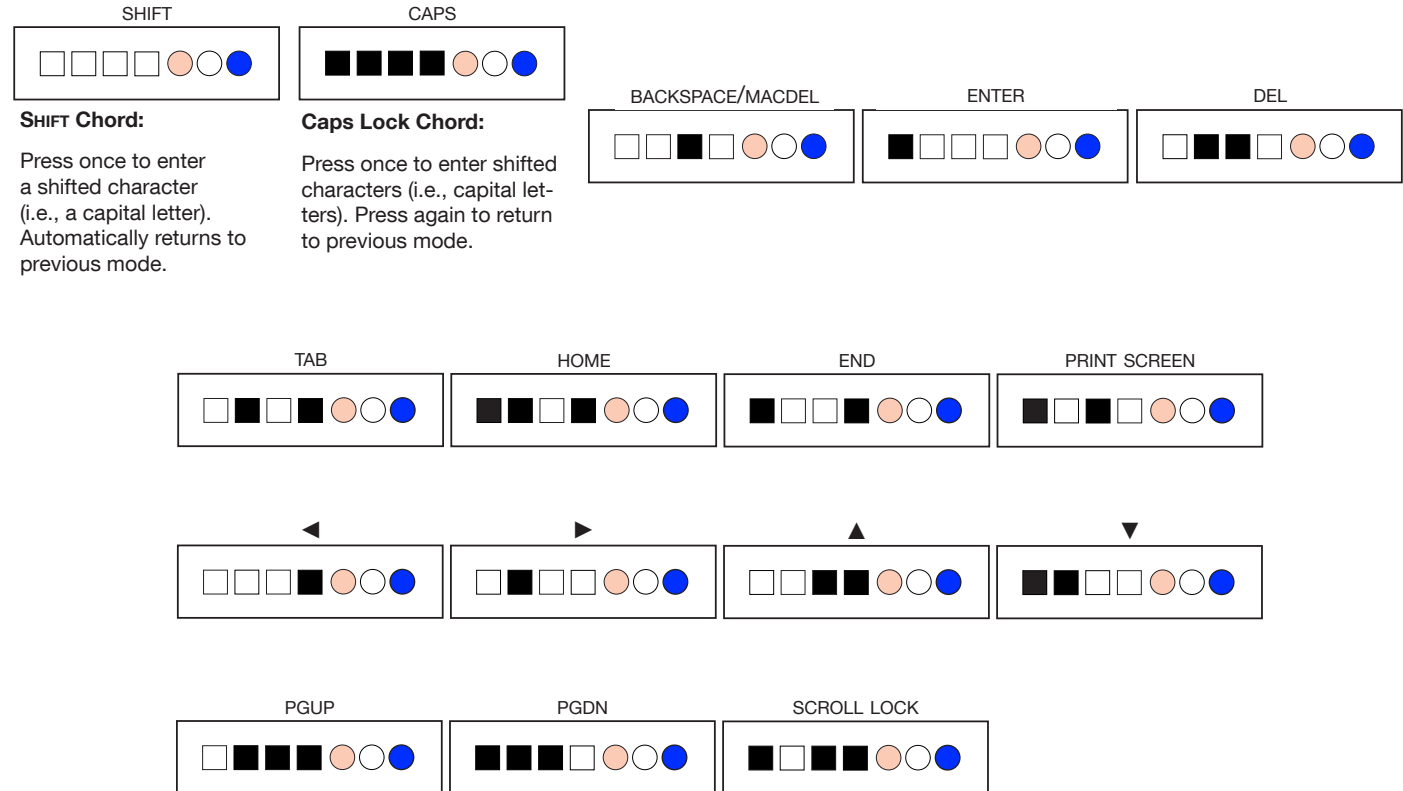

PUNCTUATION

(To enter the second character in each of the above chords, press the **SHIFT** chord first.)

Blue Family (Capitalization, screen movement and cursor control)

Reference Section

Tip:

**Notation for the
SHIFT and CAPS LOCK
chords are shown
below for your
convenience.**

SHIFT

CAPS LOCK

LETTERS Mode (The BAT Keyboard's default mode — Standard Family)

A 	B 	C 	D 	E
F 	G 	H 	I 	J
K 	L 	M 	N 	O
P 	Q 	R 	S 	T
U 	V 	W 	X 	Y
Z 	SPACE 			

Note:

To enter the second character, first press SHIFT.

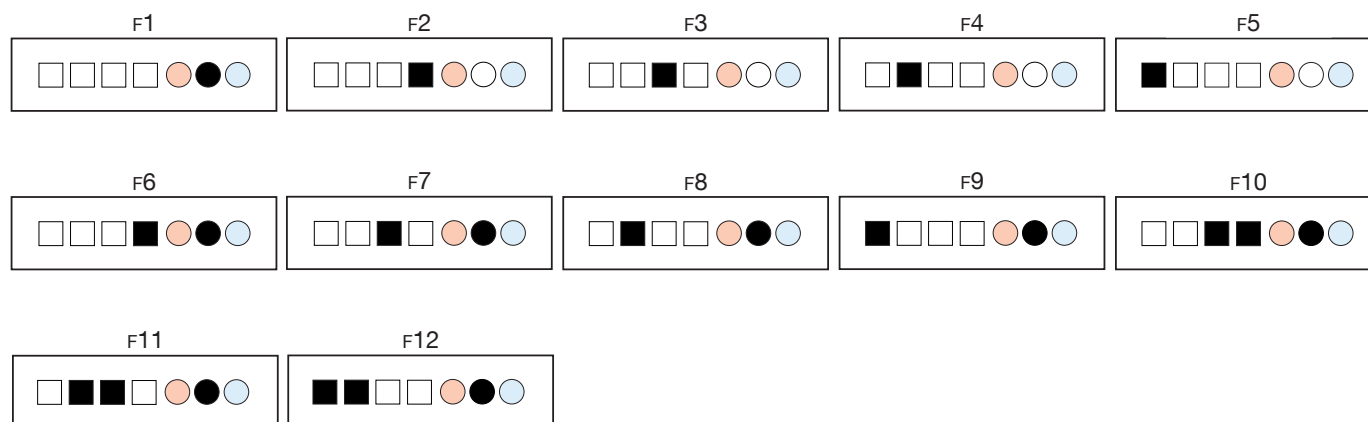

NUMBERS/SYMBOLS Mode

NUM/SYM MODE	NUM/SYM LOCK	SPACE KEY	1 / !	2 / @
<p>Press once to enter NUMBERS/SYMBOLS mode for one number. Automatically returns to the previous mode.</p>	<p>Press to enter NUMBERS/SYMBOLS LOCK. Press again to return to previous mode.</p>	<p>Once in NUMBERS/SYMBOLS mode, the Black Thumb key is used for a number. 1. The Red Thumb key becomes the space key.</p>		
3 / #	4 / \$	5 / %	6 / ^	7 / &
8 / *	9 / (0 /)	\ /	` / ~
[/ {] / }	- / _	/ ?	= / +
+	*	%	\$	&
?	" "	()	00	000

FUNCTIONS Mode

Press to enter
FUNCTIONS MODE for one
chord. Automatically
returns to previous mode.

Note:

**To enter
the second
characters, turn-
NUM LOCK on.
(The red light
will go on.)**

KEYPAD Mode:

Press to enter KEYPAD mode. Press again to return to previous mode.

Once in KEYPAD mode, the Black Thumb key is used for number 1. The Red Thumb key becomes the space key.

Keyboard Mode Indicator Lights

The current status(or mode) of the BAT Keyboard(s) can be determined by looking at their status indicator lights. Each light has four different modes: OFF, ON, SLOW BLINK and FAST BLINK. These are explained below.

MODE	BLUE	YELLOW	RED
LETTERS Mode (Lower Case)	OFF	OFF	OFF
LETTERS Mode (SHIFT)	SLOW BLINK	OFF	OFF
LETTERS Mode (Caps Lock)	ON	OFF	OFF
NUMBERS/SYMBOLS Mode (Enter one Character)	OFF	OFF	SLOW BLINK
NUMBERS/SYMBOLS Mode (Lock)	OFF	OFF	ON
FUNCTIONS Mode	OFF	OFF	FAST BLINK
LATCH Mode	SLOW BLINK	SLOW BLINK	SLOW BLINK
KEYPAD Mode (Num Lock off)	OFF	ON	OFF
KEYPAD Mode (Num Lock on)	OFF	ON	ON
CONTROL Key Depressed	OFF	SLOW BLINK	OFF
ALT/OPTION Key Depressed	OFF	FAST BLINK	OFF
WIN/APPLE	FAST BLINK	OFF	OFF
RIGHT MODE	OFF	OFF	OFF
